Industrial

Securing your sites

We can deliver the ultimate interactive system to fit any industrial space. Whether securing large warehouses, factories, racking or loading bays and car parks; we'll tailor the ideal solution.

Security and video with ProControl+

Control the entire system via ProControl+; accessing security and video via one app to arm and disarm, or check what's happening.

Full video verification

Linking security such as internal or external detectors with cameras delivers video verification of system activity via ProControl+; alerting and showing you events so that appropriate action can be taken.

Defend from the perimeter

Superior perimeter defence covers every angle around the building; notifying you of potential intruders before a break-in can even be attempted.

Compatible with professional 24/7 monitoring

Alongside the ability to monitor on-site and remotely via ProControl+, the system can be connected to your local alarm receiving centre (ARC) for professional 24/7 monitoring and response.

Full and separate area control

Arm and disarm the entire building or specific areas; supply staff with convenient, easy-to-use tags and/or ProControl+ access as required. You can also monitor arming logs to ensure normal patterns of activity.

Euro 46 V10

A hybrid control panel that delivers a wired installation, with wireless expansion capabilities to deliver a tailored system with full remote ProControl+ functions.

Dual-technology detector

Combines two detection technologies for enhanced protection covering a volumetric area - perfect for warehouses.

Dual-technology detector with anti-mask

All the functions of a dual-technology detector, but is also equipped with anti-mask technology to notify sabotage attempts.

Volumetric coverage PIR

Monitors a 12m radius volumetric area for body heat - perfect for indoor rooms and spaces.

Curtain coverage PIR

Monitors a long narrow 18m area - perfect for corridors and aisles.

Confirmation detector

Comprised of both a PIR and a dual-technology detector in a single housing, independently they work together to confirm an intrusion – excellent for high security rooms that contain valuables.

360 ceiling mounted PIR

Observes a circular area which ranges in diameter depending on height - ideal for protecting spaces where racking or objects would block a detector's view.

ProControl+

Integrating video and intruder systems in one app to provide complete control over security systems.

Proximity tags

Easy to add, edit and delete, these can be simultaneously used for arming, disarming and door access.
